IMPORTANT: READ BEFORE USING PRODUCT

HOW TO USE:

1- **FOR BEST RESULTS, USE LITHIUM AA BATTERIES. THEY WILL PROVIDE MORE POWER THAN ALKALINE AA BATTERIES.**
2- Slide off battery cover and load two "AA" batteries. Follow the battery polarity as indicated inside the unit. **The 2 batteries should be facing opposite directions.**
3- Replace the battery cover.
4- Slide the switch down to the ON position. The top will light up blue. You will also see 3 blue lights on the front of the unit (the Power Gauge) indicating the power remaining in the 'AA' batteries. (3 lights – FULL, 2 lights HALF, 1 light LOW, no lights EMPTY)
5- When not using the Turbo Charge leave the unit in the OFF position to preserve battery life.
6- Connect the appropriate adapter for your cell phone to the top of the TURBO CHARGE.
7- Slide the switch down to the ON position, the blue lights will illuminate.
8- Connect the adapter to the same place on your cell phone where you connect other charging adapters. **Do NOT force the adapter. Doing so may damage your phone.**
9- You can now use your cell phone.
10- If the Power Gauge indicates Empty or your phone shows that it is fully charged unplug the TURBO CHARGE. If the Power Gauge indicates there is power remaining in the Turbo Charge, turn off the unit to preserve the batteries for the next use. If the Power Gauge indicates the batteries are dead replace them before the next use.

To use the Turbo Charge Flash Light slide the power switch up. Two high power LEDs will light up. You can also charge your phone while using the flash light. NOTE: When the Power Gauge indicates the batteries are EMPTY the Flash Light will still work for many hours as they require very little power to operate.

FREE ADAPTERS FOR OTHER PHONE MODELS/BRANDS:

If no included adapter fits your cell phone, please refer to our web site, http://ww.adrenalinetechnologies.com/properadapter for a free additional adapter.
(Shipping & Handling charges may apply. Adapters are not available for all phones. Offer not valid for iPod® or iPhone® adapter.)

IMPORTANT TIPS FOR OPTIMAL CHARGING:

- If your cell phone battery is dead, it could take a number of minutes to recharge the cell phone in order for it to be operational. The best results can be achieved by connecting the TURBO CHARGE at the first indication of a low battery. At a totally "dead" battery condition many phones pulse charge the battery until voltage comes to a sufficient level to allow rapid charge.
- For **emergency purposes** TURBO CHARGE can provide a quick charge in just a few minutes, a more efficient charge can be achieved if the TURBO CHARGE is allowed to charge uninterrupted (no talking)..
- **When all the blue lights on the side of the unit extinguish (go out) disconnect the TURBO CHARGE** and replace the "AA" batteries. They no longer have enough energy to charge the phone.
- **Do NOT** leave the TURBO CHARGE connected over night.
- Replace the "AA" batteries if the blue lights fail to illuminate.
- PDA phones will operate more efficiently with a lithium battery.
- When in use, the Turbo Charge may feel warm to the touch. This is normal and indicates the TURBO CHARGE is working at maximum efficiency.
- If your cell phone is not charging, simply re-set your phone by removing the cell phone's battery and re-inserting it.

LIFETIME GUARANTEE:

In the unlikely event that your TURBO CHARGE damages your cell phone battery at anytime, we will replace your cell phone battery free of charge. To have us replace your damaged cell phone battery, simply send us: (1) your cell phone, (2) the TURBO CHARGE that caused the damage, (3) the UPC bar code from the package, (4) the sales receipt from your purchase of the TURBO CHARGE, and (5) your mailing address in the U.S. to: Adrenaline Technologies Inspection Dept., 125 Commerce Drive, Hauppauge, NY 11788. This lifetime guarantee is not valid if the TURBO CHARGE has been tampered with or altered in any way or if the damage to the cell phone battery is attributable to any other cause.
